Experience

Automation Engineer, CloudBeat

August 2019 – Present

cloudbeat.io is a test automation, analytics and monitoring platform.

- Developing and maintaining scripts in a page object model using Oxygen, JS, Java, Selenium, playwright on all sorts of websites as well as SaaS apps including Dynamics CRM & Salesforce.
- Helping various customers to implement test automation from scratch in their organization.
- Instructing QA teams on the CloudBeat platform, Oxygen and automation best practices.
- Creating automated tests for native and hybrid mobile apps using Appium with Oxygen.
- Building SOAP and REST API performance tests using JMeter and Postman.
- Managing version control using Git with Github and Bitbucket.

Quality Assurance Engineer, FAST

September 2018 – August 2019

fast-apps.com is a networking platform for the freight industry.

- Helped to insure we release the best possible version in time for the global entrepreneur week, which we ended up winning and getting an investment from the Israeli Shark Tank.
- Carrying out in depth manual tests including sanity, functionality, error handling, recovery, integration, compatibility, regression and UI / UX on both web and mobile environments.
- Responsibility for planning and executing STP, STD, STR documents for the entire team.
- Tracking issues, visual bugs as well as logical errors and reporting them using JIRA.

Projects

chat-up.netlify.app: A chat app using JavaScript OOP approach and Firebase as a database.

makeyev-finance.netlify.app: A mortgage advisor website with emails using smtp.js & elastic.
